Course summary

Tables and charts are a great way to present numerical information in a clear and concise form. This free course, Presenting information, explains how to use the Windows calculator to carry out basic operations and calculate percentages. You will then learn how to use charts and tables to represent and interpret information.

Learning outcomes

By completing this course, the learner should be able to:

- use the Windows calculator to carry out basic operations and calculate percentages
- interpret and use information presented in tables and charts
- round numbers appropriately.

Completed study

The learner has completed the following:

Section 1
